

## NOTICE OF INDEPENDENT REVIEW DECISION

September 11, 2003

MDR Tracking #: M2-03-1677-01

IRO Certificate #: IRO4326

The \_\_\_\_ has been certified by the Texas Department of Insurance (TDI) as an independent review organization (IRO). The Texas Workers' Compensation Commission (TWCC) has assigned the above referenced case to \_\_\_\_ for independent review in accordance with TWCC Rule §133.308 which allows for medical dispute resolution by an IRO.

\_\_\_\_ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, relevant medical records, any documents utilized by the parties referenced above in making the adverse determination, and any documentation and written information submitted in support of the appeal was reviewed.

The independent review was performed by a \_\_\_\_ physician reviewer who is board certified in neurosurgery which is the same specialty as the treating physician. The \_\_\_\_ physician reviewer has signed a certification statement stating that no known conflicts of interest exist between him or her and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for a determination prior to the referral to \_\_\_\_ for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to this case.

### Clinical History

This is a male with complaints of back pain related to an injury \_\_\_\_\_. He has had a multi-level fusion done approximately 7 months ago. The patient continues to have intractable back pain.

### Requested Service(s)

L3-4 lumbar laminectomy, decompression, discectomy, posterolateral fusion, posterior lateral interbody fusion, TIMX pedicle screws, Brantigan cages, and iliac crest bone graft

### Decision

It is determined that the proposed L3-4 lumbar laminectomy, decompression, discectomy, posterolateral fusion, posterior lateral interbody fusion, TIMX pedicle screws, Brantigan cages, and iliac crest bone graft are medically necessary to treat this patient's condition.

### Rationale/Basis for Decision

Based upon the medical records reviewed, transitional level deterioration is most likely occurring, which would impede any attempt at rehabilitation of this patient. In addition, the discography results were positive at the L3-4 level. Therefore, it is determined that the proposed L3-4 lumbar laminectomy, decompression, discectomy, posterolateral fusion, posterior lateral interbody fusion, TIMX pedicle screws, Brantigan cages, and iliac crest bone graft are medically necessary.

This decision by the IRO is deemed to be a TWCC decision and order.
